Abstract

Adolescents are ranked in the search for its own identity, which is also said to be unique in the growing stage. In the search for identity, physical and spiritual growth should also be in line to ensure the development of a healthy life. Likewise, technology of the world is growing rapidly, and this affects the lifestyles of adolescents. mLearning use is also expected to be popular for their education. Adopting a theoretical framework based on literature review of spiritual education for adolescents this article explore some keys about the needs of spiritual education for young adolescents in Malaysia. This paper reports on needs assessment of spiritual education for Malaysian young adolescents via mLearning. Findings of the study are discussed in light of conceptual model for spiritual education in Malaysia

Keywords: Spiritual Education, Adolescents, mLearning, Needs Assessment.
